Professional Summary

Senior Software Engineer with **5+ years** of experience building **full-stack product platforms** and **scalable backend infrastructure** across **React, Node.js, and TypeScript**. Experienced in designing **event-driven architectures**, **idempotent workflows**, and reliability-focused systems for **transaction-heavy, high-throughput products**. Proven track record **leading cross-team delivery**, mentoring engineers, and shipping **production systems at scale**: spanning identity platforms, marketplace services, incentive engines, and data pipelines. Active in **AI/LLM integration**, including **RAG pipelines**, **agentic workflows**, and MCP tool orchestration.

Professional Experience

Senior Software Engineer – (Fullstack, Backend Systems, AI/LLM) Dec 2023 — Present
MON Co. Remote, Singapore

- **High-traffic platform**: scaled systems supporting **\$30M+ user deposits** and thousands of concurrent users in production.
- Reduced API latency by **60%** on high-read endpoints via **cache-first Redis** and query optimization across product traffic.
- Built **unified identity and auth layer**: single-session UX across multiple products, cut auth fragmentation at scale.
- Architected **pokemon cards marketplace platform**: intake-to-settlement pipeline, trade APIs, and portfolio reads at scale.
- Automated catalog with **LLM-powered OCR pipelines** (Telegram, MCP): cut manual catalog time by **80%** for ops workflows.
- Implemented **RAG + vector search**: image-based retrieval, pricing signals, human-in-the-loop checkpoints, and QA workflows.
- Designed **async settlement system**: request lifecycle modeling, share accounting, delayed fulfillment, and reconciliation.
- Built **user activity verification system** with gas sponsorship: frictionless onboarding for mainstream users at scale.

Senior Software Engineer – (Tech Lead, React Native, Solidity) Jan 2023 — Dec 2023
Pop Social Remote, Dubai

- Led **4-engineer React Native team** on AI social app across mobile growth, creator tools, retention loops, and **50K+ MAU**.
- Drove **20% user growth** via onboarding and engagement redesigns: simplified flows for mainstream mobile users and creators.
- Boosted session time **35%** via state and query optimization: eliminated re-renders and data-flow inconsistencies in-app.
- Migrated to in-house **auth and session layer**: reusable identity management across mobile, web, and backend services.
- Added **profile identity layer**: user naming, social graph integration, and consistent cross-product presence in apps.

Fullstack Developer – (React.js, Node.js, Express, Solidity) Jul 2022 — Dec 2022
Colexion Gurgaon, India

- **Digital collectibles and fantasy gaming platform**: scaled **TopRun** marketplace APIs supporting **10K+ DAU** during live peaks.
- Cut MTTR (mean time to recovery) **50%** via observability-first logging, health checks, and alert triage in production.
- Unified **external event indexing** via subgraph-based pipelines: eliminated raw API reads, improved consistency across flows.
- Migrated from MongoDB to **PostgreSQL + Sequelize**: stronger relational model and improved query performance under load.

Fullstack Developer – (React.js, TypeScript, Rust) Jul 2021 — Jun 2022
Cykura Remote

- **Financial trading platform**: built concentrated-liquidity swap UI with LP management and position tracking for traders.
- Adapted **financial math** (liquidity ranges, fee tiers, position accounting) into clean user-facing product UX at scale.
- Implemented **analytics pipelines**: TVL, volume, and position data surfaces for product and trader views for launch decisions.
- Separated **ingestion, read models, and UI state**: cut debug time and reduced coupling as complexity grew in production.

Skills

Languages: TypeScript, Python, Go, SQL, NoSQL, Solidity, Rust (familiar)
Backend: Node.js, FastAPI, Nest.js, PostgreSQL, Redis, Kafka, GraphQL, OpenTelemetry, AWS CDK, Docker, CI/CD
AI / LLM: RAG pipelines, LangChain/LangGraph, Agentic workflows, MCP tool orchestration, Vector search
Frontend: React, Vite, Next.js, React Native, Expo, GraphQL, TanStack, Zustand, Redux, Tailwind, CSS, Observability

Education

B.Tech, Computer Science (CSE) 2018 – 2022
Guru Gobind Singh Indraprastha University (IPU), Delhi CGPA: 8.6
