

Simranjeet Singh

Senior Fullstack Software Engineer

smrnjeet.dev@gmail.com | jeet22.xyz | github.com/smrnjeet222 | linkedin.com/in/smrnjeet222 | +91 79822 45402

Professional Summary

Senior Fullstack Engineer with **5+ years** owning product systems end to end: responsive **React** and **React Native** surfaces, the **Node.js** and **Python** services behind them, and **PostgreSQL** and **MongoDB** underneath. Lifted session time **35%** with list virtualization, optimistic updates, and N+1 removal, and led 4 engineers shipping to **50K+ MAU**. Spent recent years on distributed backend systems: event-driven services, idempotent async orchestration, and production observability, with **RAG-based AI** integrations.

Work Experience

Senior Software Engineer – (Backend Systems, Distributed Services, Platform Infrastructure) Dec 2023 — Present
Pixelmon Labs (MON Co.) Remote, Singapore

- Event-Driven Pipelines:** Built Kafka-backed indexing and event-processing services in Node.js and Go for high throughput.
- Catalog Automation:** Cut manual catalog time 80% with LLM-powered OCR pipelines over Telegram and MCP orchestration.
- Observability:** Instrumented services with OpenTelemetry tracing, structured logs, and Sentry alerting for faster triage.
- Reusable Logic:** Designed centralized logic layers and metadata APIs reused across multiple SSR pages and client runtimes.
- Database Tuning:** Optimized PostgreSQL schemas, index designs, and cache-first Redis pathways, reducing latency by 60%.
- Auth & Identity:** Shipped unified authentication and session layers with schema validation, centralizing user onboarding.
- Async Execution:** Shipped async execution networks with retries, timeouts, and distributed transaction state recovery.
- Payments Lifecycle:** Modeled payments as intent, execution, settlement, and projection with async propagation to services.
- Technical Direction:** Set architecture patterns and docs so product teams shipped without redesigning core state flows.

Senior Software Engineer → Tech Lead – (React Native, Fullstack & Mobile, Team Lead) Jan 2023 — Dec 2023
Pop Social Remote, Dubai

- Team Leadership:** Led a 4-engineer team, collaborating with design to build and ship user-facing products with 50K+ MAU.
- API Abstraction:** Shipped custom auth/session abstractions and developer-facing APIs for reusable identity management.
- Real-Time Systems:** Integrated WebSockets and webhook listeners, resolving data synchronization bottlenecks under load.
- Feed Performance:** Virtualized feed and reels lists and batched N+1 reads, holding 60fps scroll on mid-tier devices.
- State & Caching:** Sliced Zustand stores with TanStack Query dedupe and optimistic updates, making interactions instant.
- Passkey Auth:** Implemented WebAuthn/FIDO2 passwordless login with registration, assertion, and platform fallback paths.
- Product Surfaces:** Owned profile, onboarding, and content feed surfaces across reels and posts, design to release.

Founding Fullstack Engineer – (React.js, TypeScript, Rust, PostgreSQL, Fullstack & Tooling) Jul 2021 — Dec 2022
Cykura Delhi, India

- Systems Programming:** Built Rust backend tools, profiling and benchmarking code to optimize memory allocation under load.
- Marketplace APIs:** Built and scaled REST/GraphQL APIs and internal admin dashboards supporting over 10K active users.
- PostgreSQL Migration:** Migrated MongoDB to PostgreSQL, designing schemas and indexes to optimize query performance.
- Data Pipelines:** Unified event indexing pipelines, eliminating API bottlenecks and improving database consistency.
- State Isolation:** Separated ingestion loops, read models, and UI state, improving failure isolation in production.
- SRE & CI/CD:** Cut MTTR 50% using observability logging, alert triage, and automated GitHub Actions CI/CD pipelines.

Skills

Languages & Testing: TypeScript, JavaScript, Python, Go, Rust, SQL, Solidity, Bash, Jest, Vitest, Playwright, Supertest
Frontend: React (Next.js), React Native (Expo), Zustand, TanStack Query, Tailwind CSS, Vite, Storybook, WebGL, WASM
Backend & Data: Node.js (NestJS/Express), FastAPI, Go (Fiber), REST, GraphQL, gRPC, WebSockets, PostgreSQL, Redis, MongoDB
Infra & Observability: AWS (ECS, Lambda, IAM), Docker, Kafka, CI/CD, OpenTelemetry, Grafana, ClickHouse, Sentry, RAG, MCP

Featured Projects

NextFlow — Real-time DAG Workflow Engine (Next.js, Postgres, Trigger.dev) github.com/smrnjeet222/nextflow
Durable Execution: Ran concurrent DAG runs with topological sort and background jobs surviving serverless timeouts.

Education

B.Tech, Computer Science (CSE) 2018 – 2022
Guru Gobind Singh Indraprastha University (IPU), Delhi CGPA: 8.6
